

3rd generation
of a technology
that has proven
its effectiveness...

Used for over 20 years by thousands of centers around the world,
Apilus is the number 1 brand in permanent hair removal.

Dectro International's Research and Development team is proud to introduce the 3rd generation of computerized *Apilus* epilators. Even more effective, comfortable and versatile, the new *Apilus 3G* electrolysis devices will greatly impress you!

The Gentle Way
to 100% Permanent
Hair Removal.

Don't settle for anything less!

APILUS 3G

APILUS JUNIOR 3G APILUS SENIOR 3G

Features

High performance circuit (25% more powerful than the <i>Junior 3G</i>)		•
Radio frequency 13.56 MHz	hundredths (sec)	thousandths (sec)
Superior comfort level		•
Treatment modalities: <i>Thermolyse, Flash, Blend, OmniBlend, Electrolysis, Anaphoresis, Cataphoresis, Thermocoagulation</i>	•	•
Additional treatment modalities: <i>MicroFlash, MultiPlex, MultiBlend</i>		•
<i>IMM-Pac</i> technology including 2 exclusive modalities (<i>MultiPlex</i> and <i>MultiBlend</i>), a series of programs for insulated probes and a proportional pulsing function with variable delay.		•
Hair removal programs classified by modality, body area, hair type and probe type (insulated or non-insulated) allowing an unparalleled efficiency and ease of use.	512 programs	1080 programs
Possibility to create 60 customized programs		•
Cataphoresis programs for customized post-epilatory care	•	•
Unique tolerance test for more comfortable <i>Blend</i> treatments	•	•
Skin moisture sensor	•	•
Meso-ionization function for specialized beauty treatments	•	•
Connection for <i>VitaPhase</i> devices to perform various beauty treatments	•	•
"Processor Sentinel" protection circuit	•	•
UL key to calculate units of lye		•
Thermolysis "zL" energy level key		•
Automatic mode for operation without footswitch	•	•
Accessory test		•
Treatment management software with cumulative income statements		•
Insertion counter that compiles the number of treated hairs and cumulative treatment time	•	•
2 probeholder connectors		•

APILUS 3G

The Gentle Way
to 100% Permanent Hair Removal

APILUS 3G

Clear Benefits

Gentleness and Security

Apilus 3G technology emits a perfectly stable 13.56 MHz radio frequency. It adapts to the variable impedance of the human body while delivering the appropriate amount of energy in order to achieve safe and gentle 100% permanent hair removal on all skin and hair types.

Performance, Precision and Customization

Apilus 3G treatment programs have been optimized for each body area and hair types, while taking into account the probe used. Your treatments will therefore be better adapted to your customers' needs. The calibration of the galvanic current and control of the units of lye have also been redesigned to provide an unparalleled efficiency during *Blend* treatments.

Versatility and Profitability

Apilus 3G offers more possibilities for professional electrologist. With only one device, you can now perform more than 8 different treatments: permanent hair removal, thermocoagulation, cataphoresis, anaphoresis, meso-ionization, light therapy*, infratherapy* and stimulomassage*.

This is definitely a profitable investment!

* Optional *VitaPhase* devices available.

2 Versions to Suit your Needs

APILUS JUNIOR 3G

The Perfect Introduction

The *Apilus Junior 3G* offers to the electrologist, in exemplary simplicity of use, the popular *Flash* and *OmniBlend* techniques as well as efficient and gentle treatments worthy of the *Apilus* brand. Undoubtedly, this introductory model will let you perform quality permanent hair removal in the most convenient way.

- MODES
- Thermolyse, Flash
 - Blend, OmniBlend, Electrolysis
 - Anaphoresis, Cataphoresis
 - Thermocoagulation

See specifications on the back.

APILUS SENIOR 3G

The Complete Solution

The *Apilus Senior 3G* is the quickest, the most powerful and the most comfortable 13,56 MHz technology on the market. It integrates the exclusive *iMM-Pac* option and offers more than 10 treatment modalities as well as 1080 programs, allowing to adapt to all situations. Its high performance and versatility makes it the most popular electrolysis device in the world.

- MODES
- Flash, MicroFlash, MultiPlex
 - Blend, OmniBlend, MultiBlend, Electrolysis
 - Anaphoresis, Cataphoresis
 - Thermocoagulation

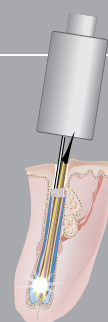

See specifications on the back.

Exclusive Techniques

MicroFlash

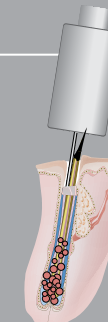

Rapid 13.56 MHz thermolysis technique working in milliseconds. Combined with insulated probes, it also allows the application of two proportional pulses (bulb, bulge). Comfortable, fast and effective, it is the technique of choice for all types of hair!

Senior 3G

Omniblend

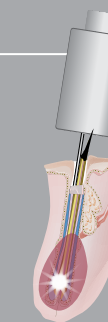

Technique that combines galvanic current with a continuous high frequency current. The *Apilus* automatically adjusts the intensity of the currents depending on the sensitivity of the customer through the unique tolerance test function. It is comfortable and easy to use.

Junior 3G Senior 3G

MultiPlex

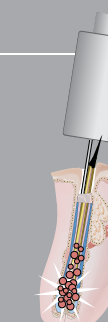

Technique that combines slow thermolysis with a very short *MicroFlash* pulse. The slow thermolysis creates a light warming preparing the follicle to receive a rapid *MicroFlash* pulse. This intense action is ideal for the permanent destruction of difficult terminal hairs or even slightly distorted hairs.

Senior 3G

MultiBlend

Technique that combines the *OmniBlend* with one pulse of rapid thermolysis *MicroFlash* issued at the end of the process. An avant-garde modality specifically designed to permanently remove stubborn and distorted hair!

Senior 3G
